2 Introduction

In November 2017, a questionnaire on health was administered to the LISS panel¹ as part of the LISS Core Study. The questionnaire was repeated in December 2017 for those panel members that had not completed the questionnaire in November. The questionnaire was administered to 7,487 panel members, of who 5,927 fully completed it (response percentage 79.2%).

The questionnaire is repeated every year starting in 2007.

This paper makes use of data of the LISS (Longitudinal Internet Studies for the Social sciences) panel administered by CentERdata (Tilburg University, The Netherlands).

¹ Reference to LISS panel data in text:

Codebook 3

This codebook contains the questionnaire as administered to the LISS panel.

- Variable names: The variable names are printed in **bold** and correspond to the names in the dataset.
- Routing: The questionnaire routing is printed in *italics* for each variable concerned.
- open: answer box (no limit to the length of the answer).
- string: answer box allowing a certain number of characters (standard is 255).
- *empty*: questions could be left unanswered
- Numerical variables: If ranges were used, these are printed in italics in the codebook if the respondent could not see them on the screen. If the respondent was able to see the ranges, the variables are printed in normal letter. Integer: If a guestion is not subject to any limit (integer), no range is indicated.
- 'Fills' (variable text) are given between straight brackets [].
- Variables in between curly brackets {} are not part of the dataset, but the corresponding questions or text were part of the questionnaire.

{intro}

The next questions are about health, you might recognize these from last year.

If you filled out the questionnaire last year, you will see some of your given answers. Of course your situation can have been changed. In that case you can correct your answers.

Some questionnaires come back every year. By comparing your answers we can measure changes over time. For instance a repeated health questionnaire measures the course of diseases in different groups of people, changes in the need for care, and in the handling of accidents and illnesses at work.

{introhe2}

We are interested in what physical activity people perform in their daily lives. The following questions are about your physical activity over the past 7 days. Think of activities that you perform at work, in and around the house, to get from one place to another, and activities in leisure time relating to recreation, training or sports.

Think of all the strenuous activities you performed these last 7 days. Strenuous physical activities are activities that require a great deal of physical exertion and cause you to breathe a lot faster than normally. Only consider those activities that you performed for at least 10 minutes per occasion.

ch17j185

If you look back on the last 7 days, on how many of those days did you perform a <u>strenuous</u> physical activity such as lifting heavy loads, digging, aerobics or cycling?

If you did not perform any <u>strenuous</u> physical activity, enter zero (0). 0..7 day(s) per week

if ch17j185>0

ch17j186 - ch17j187

On the days that you performed a strenuous physical activity, how much time did you usually spend on this activity?

You can enter your answer as an average number of hours and minutes per day.

ch17j186 number of hours per day **ch17j187** number of minutes per day *integer*, *empty*

ch17j188

Think of activities that you performed over the last 7 days that require moderate physical exertion. Moderately intensive physical activities cause you to breathe somewhat faster than normally. Again, think only of activities that you performed for at least 10 minutes per occasion. If you think of the past 7 days, on how many of those days did you perform a <u>moderately</u> intensive physical activity such as carrying light loads, cycling at a normal pace or cleaning windows?

If you did not perform <u>moderately</u> intensive physical activities, enter zero (0). 0..7 day(s) per week
